

Lab 8: Working with multiple files; passing an array to function; calling function inside of another one

For UNT CSCE1030 Fall 2021

TA Polina Nemkova

Poli.Nemkova@unt.edu

Function calling another function

- Make sure you placed the definition of the function that you want to use BEFORE writing a definition of a function that will take it in.

Passing arrays to function

```
const int SIZE=10;
```

```
int maxArray(const int array[])  
{  
    int max=array[0];  
    //rest of the code here  
}
```

Working with headers & functions in separate files

- Save a header and functions in a separate .cpp file
- Call them from main();
- (!!)
- Make sure all the cpp files you call are in the same folder where main .cpp is.
